

calculator.py

A simple Python calculator program for your GitHub practice.

```
def calculator():
    print("Simple Calculator")
    print("1. Addition")
    print("2. Subtraction")
    print("3. Multiplication")
    print("4. Division")

    choice = input("Choose an operation (1-4): ")

    a = float(input("Enter first number: "))
    b = float(input("Enter second number: "))

    if choice == "1":
        print("Result:", a + b)
    elif choice == "2":
        print("Result:", a - b)
    elif choice == "3":
        print("Result:", a * b)
    elif choice == "4":
        if b != 0:
            print("Result:", a / b)
        else:
            print("Cannot divide by zero.")
    else:
        print("Invalid choice.")

calculator()
```
